

**2023 Annual Drinking Water Quality Report**  
**Outdoor Resorts**  
**PWS 3531318**

We are pleased to provide you with this year's Water Quality Report. We want to keep you informed about the excellent water and services we have delivered to you over the past year. Our goal is and always has been, to provide you a safe and dependable supply of drinking water. Our water source is ground water from a well. The well draws from the Floridan Aquifer and Poly Orthophosphate is added for corrosion control and then the water is chlorinated for disinfection purposes.

In 2023 the Florida Department of Environmental Protection performed a Source Water Assessment on our system. The assessment was conducted to provide information about any potential sources of contamination in the vicinity of our wells. There are 3 potential sources of contamination identified for this system with a low susceptibility level. The assessment results are available on the FDEP SWAPP website at <https://fldep.dep.state.fl.us/swapp/>.

This report shows our water quality results and what they mean.

*Sabrina Stone*

If you have any questions about this report or concerning your water utility, please contact . it 863-424-1407. We encourage our valued customers to be informed about their water utility.

Outdoor Resorts routinely monitors for contaminants in your drinking water according to Federal and State laws, rules, and regulations. Except where indicated otherwise, this report is based on the results of our monitoring for the period of January 1 to December 31, 2023. Data obtained before January 1, 2023, and presented in this report is from the most recent testing done in accordance with the laws, rules, and regulations.

In the table below, you may find unfamiliar terms and abbreviations. To help you better understand these terms we've provided the following definitions:

**Maximum Contaminant Level or MCL:** The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

**Maximum Contaminant Level Goal or MCLG:** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**Maximum residual disinfectant level or MRDL:** The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

**Maximum residual disinfectant level goal or MRDLG:** The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**Parts per billion (ppb) or Micrograms per liter ( $\mu\text{g}/\text{l}$ ):** one part by weight of analyte to 1 billion parts by weight of the water sample.

**Parts per million (ppm) or Milligrams per liter ( $\text{mg}/\text{l}$ ):** one part by weight of analyte to 1 million parts by weight of the water sample.

**Picocurie per liter (pCi/L):** measure of the radioactivity in water.

# WATER QUALITY TEST RESULTS

## Radioactive Contaminants

| Contaminant and Unit of Measurement         | Dates of sampling (mo/yr) | MCL Violation Y/N | Level Detected | Range of Results | MCLG | MCL | Likely Source of Contamination |
|---|---------------------------|-------------------|----------------|------------------|------|-----|--------------------------------|
| Alpha emitters (pCi/L)                      | 10/2018                   | N                 | 4.28           | N/A              | 0    | 15  | Erosion of natural deposits    |
| Radium 226 + 228 or combined radium (pCi/L) | 5/2021                    | N                 | 4.1            | N/A              | 0    | 5   | Erosion of natural deposits    |
| Uranium (µg/L)                              | 7/2019                    | N                 | 0.80           | N/A              | 0    | 30  | Erosion of natural deposits    |

Results in the Level Detected column for radioactive contaminants are the highest average at any of the sampling points or the highest detected level at any sampling point, depending on the sampling frequency.

## Inorganic Contaminants

| Contaminant and Unit of Measurement | Dates of sampling (mo/yr) | MCL Violation Y/N | Level Detected | Range of Results | MCLG | MCL | Likely Source of Contamination   |
|-------------------------------------|---------------------------|-------------------|----------------|------------------|------|-----|--|
| Arsenic (ppb)                       | 11/2021                   | N                 | 0.0041         | N/A              | 0    | 10  | Erosion of natural deposits; runoff from orchards; runoff from glass and electronics production wastes   |
| Barium (ppm)                        | 11/2021                   | N                 | 0.010          | N/A              | 2    | 2   | Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits   |
| Cadmium (ppb)                       | 11/2021                   | N                 | 0.00025        | N/A              | 5    | 5   | Corrosion of galvanized pipes; erosion of natural deposits; discharge from metal refineries; runoff from waste batteries and paints                            |
| Fluoride (ppm)                      | 11/2021                   | N                 | 0.40           | N/A              | 4    | 4.0 | Erosion of natural deposits; discharge from fertilizer and aluminum factories. Water additive which promotes strong teeth when at the optimum level of 0.7 ppm |
| Lead (point of entry) (ppb)         | 11/2021                   | N                 | 0.00050        | N/A              | 0    | 15  | Residue from man-made pollution such as auto emissions and paint; lead pipe, casing, and solder  |
| Nickel (ppb)                        | 11/2021                   | N                 | 0.0020         | N/A              | N/A  | 100 | Pollution from mining and refining operations. Natural occurrence in soil  |
| Selenium (ppb)                      | 11/2021                   | N                 | 0.0012         | N/A              | 50   | 50  | Discharge from petroleum and metal refineries; erosion of natural deposits; discharge from mines   |
| Sodium (ppm)                        | 11/2021                   | N                 | 13             | N/A              | N/A  | 160 | Saltwater intrusion, leaching from soil  |

Results in the Level Detected column for inorganic contaminants are the highest average at any of the sampling points or the highest detected level at any sampling point, depending on the sampling frequency.

### Stage 1 Disinfectants and Disinfection By-Products

| Disinfectant or Contaminant and Unit of Measurement | Dates of sampling (mo/yr) | MCL or MRDL Violation Y/N | Level Detected | Range of Results | MCLG or MRDLG | MCL or MRDL | Likely Source of Contamination          |
|---|---------------------------|---------------------------|----------------|------------------|---------------|-------------|---|
| Chlorine (ppm)                                      | 1-12/2023                 | N                         | 0.68           | 0.7-0.8          | MRDLG = 4     | MRDL = 4.0  | Water additive used to control microbes |

For chlorine, the level detected is the highest running annual average (RAA), computed monthly of all samples collected. The range of results is the range of results of all the individual samples collected during the past year.

### Stage 2 Disinfectants and Disinfection By-Products

| Contaminant and Unit of Measurement | Dates of sampling (mo/yr) | MCL Violation (Y/N) | Level Detected | Range of Results | MCLG | MCL | Likely Source of Contamination             |
|-------------------------------------|---------------------------|---------------------|----------------|------------------|------|-----|--|
| Halo acetic Acids (HAA5) (ppb)      | 7/2023                    | N                   | 7.37           | 7.37             | N/A  | 60  | By-product of drinking water disinfection. |
| Total Trihalomethanes (TTHM) (ppb)  | 7/2023                    | N                   | 36.87          | N/A              | N/A  | 80  | By-product of drinking water disinfection  |

### Lead and Copper

| Contaminant and Unit of Measurement | Dates of sampling (mo/yr) | AL Exceeded (Y/N) | 90 <sup>th</sup> Percentile Result | No. of sampling sites exceeding the AL | MCLG | AL (action Level) | Likely source of contamination   |
|-------------------------------------|---------------------------|-------------------|------------------------------------|--|------|-------------------|--|
| Copper (tap water) (ppm)            | 6/2021                    | N                 | 0.0050                             | 0                                      | 1.3  | 1.3               | Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives |

|                        |        |   |        |   |   |    |  |
|------------------------|--------|---|--------|---|---|----|--|
| Lead (tap water) (ppb) | 6/2021 | N | 0.0010 | 0 | 0 | 15 | Corrosion of household plumbing systems; erosion of natural deposits |
|------------------------|--------|---|--------|---|---|----|--|

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Outdoor Resorts is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- (A) Microbial contaminants, such as viruses and bacteria, may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- (B) Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- (C) Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- (D) Organic chemical contaminants, including synthetic and volatile organic chemicals, are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.
- (E) Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

To ensure that tap water is safe to drink, the EPA prescribes regulations, which limit the number of certain contaminants in water provided by public water systems. The Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental

Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Center for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Please DO NOT FLUSH your unused/unwanted medications down toilets or sink drains. More information is available at <http://www.dep.state.fl.us/waste/categories/medications/pages/disposal.htm>.

We at Outdoor Resorts would like you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. If you have any questions or concerns about the information provided, please feel free to call any of the numbers listed.
